in Profits, in Reliability, in Hardiness**

**Early Heads, Large Heads, Sure Heads, Solid Heads, Compact Heads, Tender Heads,
Globular Heads, Firm Heads, Uniform Heads**

Bolgiano's Long Lost Lettuce. This wonderful lettuce was greatly prized by the leading market gardeners around New York, Philadelphia, and Baltimore some twenty-five or thirty years ago. For some unknown reason, the seed became unobtainable—was lost—until ten or twelve years ago when it was peddled along with other seeds by a peculiar Frenchman to the market gardeners of Philadelphia. Fortunately, through one of our good market gardener friends, we obtained a few seed of this wonderful lettuce and from this small quantity of seed, by careful and patient effort, we have grown a stock from which we can supply our friends. Long Lost Lettuce is of a bright attractive green color, never spotted or brownish in any part. Leaves are of much substance, and not easily torn, making it especially well adapted for shipping. It is decidedly buttery in flavor, sweet and tender. Long Lost Lettuce produces large, extremely solid, compact cabbage heads, is very hardy and will winter over splendidly. Lettuce growers who have used this lettuce say there is no lettuce quite so good as the Long Lost. You are losing an opportunity if you do not plant some of this remarkable variety.

440 Washington Asparagus

This exceedingly resistant variety was developed by the United States Department of Agriculture. It is the finest of the large type asparagus. Its quick growing habit makes it extremely tender. It is vigorous in growth, of a deep green color, with a purple tinge, a decidedly good variety for the commercial grower and unexcelled for the home garden. The flavor is excellent, having a peculiar and pleasing sweetness. You should give this variety a trial, either by planting the seed or the roots. Pkt. 10c. Oz. 40c. $\frac{1}{4}$ Lb. \$1.25. Lb. \$4.00. Postpaid.

For prices of roots see page 23.

Absolutely perfect in shape, almost round and of good size, with a very slim tap root. The leaves are green with dark crimson ribs. Bonfire Beet holds its unusually deep rich crimson color when cooked, making it very valuable for canning and pickling, and simply perfect for table use. 377 Bolgiano's Early Spring Beet

Bolgiano's Early Spring Beet, introduced by us in 1916, has proven to be one of the best and earliest beets yet offered the market gardener. Wherever it has been used, it has brought forth unstinted praise and recommendations. It is the first beet to be brought to market, always bringing the highest prices. It is perfect in shape, of the globe type, with small tap roots and small tops. The flesh is a deep red, fine grained, and exceptionally tender and sweet. It may be sown under glass, or in the open field, and will mature much earlier than other early varieties. We are constantly reselecting and improving our stock, and we believe we are offering you the earliest and best beet on the market today in Bolgiano's Early Spring. If you have never tried this beet, you should do so this Spring. Pkt. 10c. Oz. 15c. $\frac{1}{4}$ Lb. 50c. Lb. \$1.75. Postpaid.

Ford Hook
Bush Lima Bean

1032 Bolgiano's Giant Podded Emerald Isle Pole Lima Beans

A marvelous yielder of great clusters of gigantic pods, filled with extra large, thick, deliciously flavored green beans. The skin is thin and tender, and will not crack when shipped to market. The mammoth pods measure 7 to 8 inches in length and 1½ to 2 inches in width; are borne in great clusters which stand out from the foliage. The vines branch, or stool out, from the main stalk close to the ground, each vine producing 10 to 15 lateral branches. These produce tremendous growth of exceptionally vigorous vines which grow 10 to 12 feet high, producing an enormous quantity of well filled pods from the bottom to the top. The seed is green and retains this color when dried. Pkt. 10c. 1 Lb. 30c. 2 Lbs. 60c. 10 Lbs. \$2.70. 25 Lbs. \$6.50. 100 Lbs. \$25.00.

1119 Fordhook Bush Lima Beans

This variety is entirely distinct, of strong erect true bush-like growth, averaging 25 to 30 inches in height, by 20 to 24 inches across the top. The foliage is of heavy texture, and very dark green color. The pods are borne in clusters of

from 4 to 8 inches and resemble those of the Dreer's Bush or Potato Lima, but average more than double the size, measuring from 4 to 5½ inches long, 1¼ inches wide, and ¾ of an inch thick, and contain three to five large delicious beans. Fordhook is a heavy yielder, and is very early, making it a favorite with the truckers and a very good variety for the home gardener. Both pods and the delicious green beans are larger and thicker than the Large Bush Limas. The plants grow upright, about 30 inches high with luxurious sheltering foliage, and bear continuously until frost. Often five to eight pods measuring 5 to 6 inches long and 1¼ inches wide are borne in clusters on one stalk. Enormous Bush Lima Beans will outyield other varieties by one-third. The seed beans are greenish, and very handsome, making a very desirable variety for shelling. Pkt. 10c. 1 Lb. 36c. 2 Lbs. 72c. 10 Lbs. \$3.30. 25 Lbs. \$8.00. 100 Lbs. \$30.00.

Bolgiano's Big Winner Wakefield Cabbage

25 **Bolgiano's Big Winner Wakefield Cabbage**

This variety, introduced by us, still holds its popularity with the truck grower and home gardener. It is as large as the Charleston Wakefield, and as early as the Jersey Wakefield. The heads are solid and heavy, making it a perfect shipping cabbage. The flavor is deliciously sweet. It has few outer leaves, and makes a handsome appearance as you will note from the photograph. The market gardener and shipper will find this variety truly a Big Winner. Pkt. 10c. Oz. 30c. $\frac{1}{4}$ Lb. \$1.00. Lb. \$3.00. Postpaid.

43 **Bolgiano's Extra Large Late Flat Dutch Cabbage**

Market Gardeners Choice of Stock

This variety has won the favor of a large number of critical market gardeners, who prefer the largest type of

Late Flat Dutch Cabbage. It is also very solid, and is not coarse, is recommended as an excellent kraut cabbage, as well as a good winter keeper. On account of its size it requires about five days longer to mature, and should be planted accordingly. Our stocks are the true type, and tested for germination. Pkt. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 75c. Lb. \$2.50. Postpaid.

154 **Bolgiano's Square Deal Cabbage**

All that the name implies. You will never make a mistake by planting this splendid money making variety. Our stock runs exceptionally uniform, large fields showing no irregular heads. The color is a fine fresh green, heads are compact and solid, with very few outer leaves. For a fine, solid, tender, uniform, early flat cabbage, Bolgiano's Square Deal has no equal. In order to produce a cabbage of this type with all the good qualities of the Square Deal it was necessary for us to make the most careful and rigid selections over a period of years, and we are confident will give our friends a "Square Deal" every time. Pkt. 10c. Oz. 30c. $\frac{1}{4}$ Lb. \$1.00. Lb. \$3.00. Postpaid.

64 Bolgiano's Pride of the Market Carrot

This beautiful, shapely, half-long carrot will come almost as early as the Oxheart. Introduced by us in 1910.

This early, tender, fine grained and deliciously flavored carrot has held its leadership since its introduction, and is still one of the best varieties brought to our market. We named it Pride of the Market because it contains all the good qualities that go to make up a good carrot. The Pride of the Market is half long; deep scarlet orange, free from small side roots, small tender core, uniform and graceful. It is fine for an early crop; in mid-summer we have seen it out-sell every other variety, and for winter there is none like it. Its attractive tops remain a rich green. Pkt. 10c. Oz. 15c. $\frac{1}{4}$ Lb. 40c. Lb. \$1.25. Postpaid.

60 Bolgiano's Extremely Early Orange Gem Carrot

There is always the desire, in the early spring, to have the new, young, tender vegetables as early as possible, and those that are brought to the market earliest always bring the highest prices. What is more toothsome, or delicious, than young tender carrots? Our Orange Gem is the variety that will come the earliest, and its quality cannot be equalled. This very delicate, distinct variety, is unexcelled for forcing purposes, but will do well if grown in the field. Has very small, fine tops. Flesh bright orange red, very crisp, tender, and sweet without stringiness. Coreless. Grows about $4\frac{1}{2}$ inches long, $1\frac{1}{4}$ inches thick, cylindrical in shape, with blunt end and small, fine, top root. Unsurpassed for the home gardener, and of great importance to the market gardener. Pkt. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 45c. Lb. \$1.50. Postpaid.

54 Bolgiano's New Century Cauliflower

One of the best cauliflowers in the world. It stands supreme in a class by itself. It heads when others fail. The large perfect heads measure from 12 to 14 inches in diameter. They are compact, deep, and solid, outweighing those of any other strain. It is the earliest of all cauliflowers. Because of its close growing compact habit and small leaves, one third more can be planted on the same space than can be done with other varieties. It is the most carefully grown cauliflower in existence. Pkt. 10c. Oz. \$2.25. $\frac{1}{4}$ Lb. \$1.50. Lb. \$25.00. Postpaid.

105 Danish Giant or Dry Weather Cauliflower

Bolgiano's New Century Cauliflower

Pride of the Market Carrot

Four generations of critical market gardeners located in the vicinity of Baltimore have dealt with Bolgiano of Baltimore through this store. Bolgiano of Baltimore, during its 106 years of business, has never been located more than one-quarter mile from its present site to which it moved after having been completely burned out in the big Baltimore Fire of 1905.

Golden Self-Blanching Celery

71 Golden Self-Blanching Celery

Bolgiano's Selected Stock

Bolgiano's French Grown Golden Self-Blanching Celery is of the most Superb Quality. Its crispness and tenderness and its delightfully rich, nutty, appetizing flavor makes it the leading variety in any market. The stalks are large, solid and a beautiful, rich golden yellow, entirely free from stringiness. It is an excellent keeper, stands shipment better than any other sort and brings the highest market prices. It is a vigorous dwarf grower, compact in growth and self-blanching to a very remarkable degree; even the ribs become a handsome, fresh, clean, yellow color, with a heart that is large and solid and of a beautiful rich golden yellow. It is quite early and easy to cultivate. In the home garden it produces golden yellow stalks very early, which are crisp, tender and nutty in flavor. It will keep in good condition until Christmas or New Year. Our stock of this most wonderful Celery cannot be surpassed. It is grown especially for us by the originator in France. 394 Bolgiano's

Crystal Springs Cucumber

The result of years of reselecting and improvement of the White Spine type. The vines are of strong vigorous growth, maintaining their luxuriant foliage and setting their extra long fruit abundantly from the earliest to the latest season, and are mildew proof. The cucumbers are uniformly smooth and regular in

form, no misshapen fruits or culls. The skin is an attractive rich, glossy deep green, which is retained long after being picked, making it an ideal long distance shipper. It never turns yellow, even when fully ripe. The flesh is firm, fine grained, tender, pure sparkling white of the most delightful and refreshing flavor, entirely free of the bitter taste so often noticed in other varieties. It measures from 2 to 3 inches in diameter and has very few seeds. It is equally well adapted for culture under glass or the open field. It cannot be excelled for shipping, for the market or home use. Pkt. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 60c. Lb. \$2.00. Postpaid.

Bolgiano's Extra Early Harvester Corn

1270 **Bolgiano's Extra Early Harvester Sugar Corn**

This is an extremely early variety of real sugar corn. For many years the home gardeners have been anxious to obtain a White corn that would be as early and as sweet as the

Golden Bantam. Bolgiano's Early Harvester fills this want as it is earlier, sweeter and has a larger ear than any of the other early varieties of sugar corn. In the northern part of Maine where the seasons are very short and where corn does not grow to maturity, Bolgiano's Early Harvester has always matured. It can be planted early in the spring, just as soon as the ground begins to show warmth. It is a rapid grower of medium height. This is a superior variety for the home gardener and a profitable extra early corn for the market gardener. Pkt. 10c. 1 Lb. 25c. 2 Lbs. 50c. 10 Lbs. \$2.25. 25 Lbs. \$5.50. 100 Lbs. \$20.00.

443 **Barden's Wonder Bantam Corn**

A recent introduction which we highly recommend

To fill an ever increasing demand for an early sweet corn, having all the good qualities of Golden Bantam, together with a larger ear, and maturing about the same time Mr. Barden undertook the task of accomplishing, and Wonder Bantam is the result. Trials made in Vermont to test this variety for earliness, productiveness and hardiness have proven it to be more vigorous, productive and as early as the Bantam, having the advantage of much larger ears, set up higher on the stalk. It grows from 5 to 6 feet high, ears 8 to 10 inches long, filled with eight rows of rich golden yellow kernels. It will appeal to the critical market and house gardener, as well as the canner who has been looking for a Bantam corn that will produce more tonnage per acre and not sacrifice high quality. Pkt. 10c. $\frac{1}{2}$ Lb. 30c. 1 Lb. 50c. 2 Lbs. \$1.00. 10 Lbs. \$4.50. 25 Lbs. \$10.00.

Barden's Wonder Bantam Corn

1182 **Bolgiano's Cream and Honey Corn**

This variety, introduced by us a number of years ago, still holds its popularity as one of the extremely true sugar corns. It may be planted as early as the Extra Early Adams as it is wonderfully hardy. Grows about 4 feet high, stalks often carrying two ears from 5 to 6 inches long of a rich delicious and distinct flavor unequalled by any other variety. A splendid corn for the home garden. If you have never grown this corn, you have a real treat in store for you if you will plant some this spring. Pkt. 10c. 1 Lb. 24c. 2 Lbs. 48c. 10 Lbs. 2.10. 25 Lbs. \$5.00. 100 Lbs. \$18.00.

438 **Perfecto Cantaloupe**

A new type of the Rocky Ford but a great improvement on this well known melon. The seed cavity is triangular, and the flesh is pink in color, and extremely thick, having a deliciously sweet and spicy flavor. The melons are almost perfectly round, heavily netted showing no ribs. The shipping qualities are splendid and we think the Perfecto will supersede many of the older shipping varieties. Pkt. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 60c. Lb. \$2.00. Postpaid.

Perfecto Cantaloupe

439 **Pearl Pink Meat Cantaloupe**

This is a new variety of exceptional merit. The netting is very coarse and the skin is a beautiful shade of pearl, making the outside appearance very attractive. The flesh is deep and pink in color, the shipping qualities are excellent and wherever it has appeared on the markets has commanded a premium over other varieties. It is oval shape and slightly larger than the Rocky Ford. We have only a limited supply of seed. We, therefore, suggest you place your order early. Pkt. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 60c. Lb. \$2.00. Postpaid.

Pearl Pink Meat Cantaloupe

16 **Junior Rocky Ford Cantaloupe**

Bolgiano's Extra Selected Stock

Two weeks earlier, a little larger, twice as productive as Rocky Ford. More thoroughly and deeply netted. Rust and blight proof. Packs in crates better and carries better than most melons. This Greatest of Money-Making Cantaloupe had for its parents two exceptionally fine stocks of Rocky Ford Melons. It has been bred up by our expert growers to be entirely blight and

rust proof. Junior is a wonderfully prolific yielder, single plants producing as high as 16 fine melons. It will develop shipping fruit ten days to two weeks before the Rocky Ford. In form it is ideal, being just the right shape to pack to best advantage into crates. In size it is little larger than the regular Rocky Ford. Its netting is close and deep, thoroughly covering the melon, protecting its keeping and shipping qualities and lessening the loss of weight from evaporation. In quality it is most deliciously sweet and spicy, creating a largely increased demand on account of these excellent points. The seed cavity is very small and well filled with seed, and the attractive green flesh is thick, smooth and firm. Pkts. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 60c. Lb. \$2.00. Postpaid.

¹⁰⁰ **Bolgiano's
Extra Early Black Beauty Eggplant**

This variety is the earliest of all Eggplants, being two weeks earlier than any other variety. It is of most attractive appearance, being a rich, lustrous, very dark purple, almost black. The heavy leaves which attach the fruit to the stem are bright green, making a beautiful contrast. Plants branch freely near the ground and are of compact and strong growth, and bear abundantly. The intense brilliant coloring is uniform over the whole fruit, and does not fade, or change to a lighter color, at the blossom end. Entirely free of spines or thorns, making it much easier to gather. Our strain of this variety is the finest that can be produced.

¹¹⁴ **Bolgiano's
Famous
Mammoth
King Leek**

By years of selection we have built up this stock until it has become to those who use it a pleasure to grow and decidedly a profit too. It has handsome form, is of very mild, agreeable flavor, grows double the size of ordinary varieties, has dark colored leaves, is hardy and of stout growth. The edible part is 8 to 10 inches long and about three inches in diameter. It is, without exception, the largest and best Leek ever placed in the hands of the grower. Pkt. 10c. The beautiful pure white, waxy, White Bermuda Onion, and the Yellow or Straw Colored variety are those so extensively grown in Texas, where in some sections of the state they are the main vegetable crop. The Crystal Wax is of the most beautiful appearance, making it a very ready seller in the retail markets and has a mild, delicate flavor which makes it very popular with

those that object to the strong flavor of most of the other varieties. It produces full size onions from the seed the first season. In Texas the seed is planted in September and October, and the crop is harvested the following May and June. In the southern states it is planted in the early spring, when it will mature a crop in from six to seven months. Our stock of Bermuda Onion Seed is the best that can be produced, is absolutely true Teneriffe grown, and is produced from bulbs that have been selected with the utmost care by the oldest and most experienced growers. 480 **Bolgiano's Sure Summer Header Lettuce**

Introduced by us in 1923

This lettuce is one of the many really worth while vegetables that we have introduced, in an effort to supply the market gardener with a lettuce that could be grown during the hot dry months of our summer; one that would overcome the drawbacks of both drought and heat. We have succeeded in accomplishing our end by developing this remarkable lettuce which fills a long felt want. This lettuce is the best mid-summer variety, and remains in heading condition longer than any other. It is sure to produce heads of excellent quality in the hottest, driest weather, and succeeds under these adverse conditions, when other varieties fail. The heads are good size, very solid and a fresh green color, and coming as it does when lettuce is usually scarce, brings a good price in the market. Pkt. 10c. Oz. 15c. $\frac{1}{4}$ Lb. 50c. 156 **Big Boston Lettuce** Bolgiano's Famous Stock

Big Boston Lettuce is one of the most valuable, most generally used lettuce in cultivation. Its excellent qualities have made it the most popular of all varieties. It can be grown in the open ground for summer or fall, in frames for spring, or forced cool in greenhouses, for winter use, producing under each condition grand, large, buttery yellow heads filled with sweet, crisp, tender beautifully blanchd leaves. Stands long without going seed; has few outer leaves and makes a large attractive plant. Big Boston Lettuce is especially adapted to cool open ground culture. Our stock of this famous lettuce is the finest that can be produced. Pkt. 10c. Oz. 15c. $\frac{1}{4}$ Lb. 50c. Lb. \$1.50. Postpaid.

415 **Bolgiano's Masterpiece Lettuce**

Since its introduction by us in 1920, thousands of lettuce growers located in all sections of the country are unanimous in pronouncing this lettuce to be a sure header. It is very solid, crisp, beautifully blanchd and has a mild, tender, sweet and delicious flavor. It will keep crisp, tender and sweet no matter how long it remains in the garden. It is slow to go to seed. It grows a good size, well defined head, usually measuring twelve inches in circumference, and the entire plant makes a very attractive appearance. Can be grown in the open ground after danger of frost is over, all during summer and early fall. It never spots, or turns dark, and is free from bitterness. This lettuce will please the most critical market gardeners, is equally well adapted for the home garden, nearby markets or long-distance shipment. It will do well in any section of the country. 172 **Bolgiano's Indian Chief Watermelon**

One of the most popular of the shipping melons. It has a very tough elastic rind of dark green color with indistinct thick netting all over. Flesh is a bright attractive red, flavor sweet and satisfying. For the large grower this is undoubtedly an excellent melon. It is not quite as early as the General Pershing. Pkt. 10c. Oz. 15c. $\frac{1}{4}$ Lb. 30c. Lb. \$1.00. Postpaid.

405 **Bolgiano's General Pershing Watermelon**

This melon is, without question, the finest ever produced, taken from every standpoint. Before offering it to our friends through our catalogue of 1919 when we introduced it, we made exhaustive tests in our trial grounds also placing it among some of the largest melon growers of the country. We also sought the views of representative commission houses who had handled this melon and they all agree that "General Pershing"

Watermelon far surpasses any other melon they have ever seen. General Pershing Watermelon is distinct, wonderfully productive, producing more marketable melons under the same conditions, than any other variety. Has no culls and stands dry weather excellently. The vines are very resistant to attacks of insects. In size it is uniformly large, ranging from 25 to 40 lbs. in weight, the rind is a light pea green, and very tough, making it an excellent long-distance shipper. It will not sunburn and will keep in good condition in the sun several days after becoming ripe. Eating quality is unexcelled, its sparkling red flesh is firm, sweet and entirely free

from hard centers and stringiness. Pkt. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 50c. Lb. \$1.50 Postpaid.

1048 Bolgiano's Early Bird Pea

Since its introduction by us in 1917, this pea has gained a wonderful popularity; we were confident it would, just as soon as its merits were known. It is unsurpassed for its extreme earliness, superb quality and unusual productiveness. The dwarf vigorous vines 2 to 2½ feet in height are well filled with large, beautiful deep green pods measuring 4 to 4½ inches in length filled with 9 or 10 large delicious peas. Bolgiano's Early Bird Peas can be sown as soon as the ground can be worked, as they do not rot like the fully wrinkled varieties, and can be pulled as early as the Alaska with pods double the size. One of our large growers of peas who planted 10 bushels last spring; has his order placed for his entire pea crop of 1924. He states the Bolgiano's Early Bird Peas was the only crop of peas he has made any money on for 5 years. We said when we introduced this pea, the market gardener would

396 World Beater Pepper

Bolgiano's Extra Selected Stock

This variety is a selection from the Chinese Giant, and while its fruits do not average as large as The Chinese Giant, they are larger than The Ruby King. It is ready for the market about the same time as the Chinese Giant. It bears a more abundant crop than either of these two varieties, and is a very valuable crop to grow for the market. It is also largely used by pickle manufacturers. The fruit is an attractive dry green, which turns to a brilliant handsome ruby red when ripe. The flesh is thick and of a very mild, sweet and delicious flavor. This is a fine variety to use for stuffed peppers, on account of its desirable size and flavor. This variety should be included, when making your selections for a better garden this year. Pkt. 10c. ½ Oz. 25c. Oz. 40c. ¼ Lb. \$1.25. Lb. \$4.00. Postpaid.

1088 Bolgiano's Good Luck Pea

This pea is almost as early as the Alaska, but bears a longer pod, and is more prolific. Plants strong and vigorous about 2 to 2½ feet high. Pods very attractive and about half again as long as the Alaska, well filled with deliciously flavored peas. Its earliness, size and appearance and general good qualities should recommend it to the shipper, the market and home gardener. 1083 Bolgiano's Wonder Worker Pea

Especially recommended by everyone who has ever grown it, for its exceptionally delicious sweet flavor. This pea is about one week later than the 100% Profit, the vines grow about 2½ feet high, are very sturdy, resisting pests and cold weather.

The pods when fully matured are 4 inches long, and well bulged with nice large peas, the color of pods is dark green making it a splendid shipper, and a most desirable and profitable sort for the market gardener. This variety each year is becoming more popular in the home garden, as well as the private gardens, of large estates throughout the country.

World Beater Pepper

King of Denmark Spinach

We have given special attention to the growing of our stocks of Bloomsdale Savoy Spinach, and have succeeded in keeping it free from strap leaf and other undesirable sorts which have existed in some stocks during the past few years.

This variety is grown to a much larger extent than any other, it will produce a much larger yield than other sorts, leaves grow very crimped and curled, of a dark attractive green color, making quite a pretty picture when the plants are fully matured.

It is an excellent shipper, holds well in transit, and brings good prices. It should not be planted in extremely hot weather as it is likely to shoot to seed quicker than the long standing varieties. Pkt. .05c. Oz. 10c. $\frac{1}{4}$ Lb. 15c. Lb. 35c. Postpaid.

444 King of Denmark Spinach

A very valuable addition to the spinach family for its long standing qualities. It remains in good condition from two to three weeks after other varieties have gone to seed. This characteristic makes it especially well adapted for spring planting. The plants make a rapid growth, leaves are large, very much crumpled or blistered, and of that desirable attractive dark green color. It is ready for use almost as soon as the medium early varieties. We believe this spinach will find a place among the standard sorts as soon as it becomes better known as it is sure to win favor from both home and market gardeners because of its distinctive qualities. Two weeks to mature

Bolgiano's Extremely Early Ruby King Radish is by far the best extra early radish that has been brought to any market. The color is a bright glistening scarlet. We know of no radish that will mature as quickly as Ruby King. Its small tops and quick growth, make it an ideal forcing sort; equally good for open ground culture. It is at its very best if allowed to grow quickly. Its flesh is delicious, tender, juicy and mild. We introduced this variety in 1907 and we still must give it its just place as it has not been surpassed by any of the early varieties. Pkt. 10c. Oz. 15c. $\frac{1}{4}$ Lb. 35c. Lb. \$1.00. It is a large, almost globe shaped, tomato, a beautiful red color, fine flavored, firm, solid, very prolific, and about as early as Earliana. A most excellent shipper, standing the long distance shipment from Florida to the northern markets exceedingly well. We predicted that this tomato would make a record and it has to such an extent that it has been impossible for us to produce enough seed to satisfy the demand. We have orders booked months in advance. To be sure of getting the true Bolgiano's Florida Special, you should order your seed from us, the originators, as seed has been sold in Florida for this variety that has turned out to be a very inferior sort, causing disappointment and loss. 460 The Bolgiano Tomato

Introduced by Bolgiano of Baltimore in 1920. Behind this tomato we have put our reputation of over 100 years, by naming it The Bolgiano, knowing that as soon as it became known to our customers it would make a place for itself at the head of the early varieties of real merit. So far we have not been able to produce enough seed to supply our demand. It is two weeks earlier than Earliana, a beautiful, deep red color, with skin that is tough enough to make it an excellent long distance shipper. The flesh is solid, sweet and tender, entirely free from tough green core, and has no green streaks radiating from the stem end. It has very few seeds, and no watery seed cavities; a very heavy yielder of good size fruit throughout the entire season, until checked by frost. The heavy potato leaf foliage protects the fruit from sun scald and blister. Equally profitable for canner and shipper and most desirable for market and home gardener. 234 Bolgiano's John Baer Tomato

This extremely early tomato, introduced by us in 1914, is still gaining in popularity, and is better today than it ever was, due to our careful reselecing. It is a perfect, high crown tomato, entirely free from core, an enormous yielder, setting its fruit in clusters, ripens evenly up to the stem end, is uniform with practically no misshapen uneven fruit. It will not burst when dead ripe. Has a mild deliciously sweet flavor, and is a solid mass of meat with very few seeds. It requires from 6 to 8 bushels of fruit to make one pound of seed. John Baer tomato has a brilliant glistening red color. Its skin is tough which makes it a good shipper; this also is of decided advantage to the canner as it can be removed quickly without trouble and waste. It is a variety that will increase in fruit production rather than foliage when heavily manured. Pkt. 10c. $\frac{1}{2}$ Oz. 30c. Oz. 50c. $\frac{1}{4}$ Lb. \$1.40. Lb. \$5.00. Postpaid.

Culture. Beans are somewhat tender, but it often pays to take some risk. Plant in warm, loamy soil at the beginning of settled, warm weather in Spring, and at intervals for succession until August. Rows may be made 2 feet apart, and the Beans planted not more than 1 inch deep and several inches apart in the drills, or 3 or 4 Beans in hills 6 to 8 inches apart. Culture. Fibrous loam, well drained and well enriched, will raise good Beet crop. For early table Beets, have drills 16 to 20 inches apart, and sow the seed about 1 inch deep, as early as the ground can be put in good shape, or seed may be sown under glass 4 weeks sooner and the young seedlings transplanted to open ground, to give an extra early crop.

Give thorough and clean cultivation, and thin the plants to stand 2 inches apart in the row.

Bolgiano's Frost-Proof Cabbage Plants

**Will Mature Heads Two To Three Weeks Earlier
Than Your Home Grown Plants and
Double Your Profits**

TO GET THE ADVANTAGE OF THESE FROST-PROOF CABBAGE PLANTS THEY MUST BE PLANTED A MONTH OR SIX WEEKS EARLIER THAN YOU WOULD PLANT HOME-GROWN PLANTS.

WE FILL ORDERS FROM DECEMBER 1st TO MAY 1st.

There are a number of islands along the Sea Coast of South Carolina, where the soil and climatic conditions are just suited for growing tough, hardy cabbage plants during the Winter and early Spring. The plants make a slow but steady growth, until at eight to ten weeks of age they are very tough and hardy, the buds are

Early Jersey Wakefield

purple and the outer leaves a reddish brown. When in this condition they can be shipped to territory farther north and be planted in the open ground a month to six weeks earlier than the home-grown hot bed or cold frame plants. The FROST PROOF CABBAGE PLANTS will stand a temperature of 20 degrees above zero without injury. The land freezing, or the plants being covered with ice, sleet or snow after they are planted will not injure them. The roots grow from time they are planted, and just as soon as Spring weather starts, the established root growth assimilates the fertilizer in the soil, the plants grow very fast, maturing headed cabbage two to three weeks sooner than you can mature them from hot bed and cold frame plants.

The plants when received will be somewhat wilted and have a hard stunted appearance, which will be disappointing to persons who have never used these plants before. Regardless of appearance, they will produce the crop results.

VARIETIES: EARLY JERSEY WAKEFIELD, CHARLESTON LARGE TYPE WAKEFIELD, SUCCESSION AND EARLY FLAT DUTCH.

Bolgiano's Early Jersey Wakefield Cabbage

Culture. Early Cabbage requires a rich, warm, loam soil, well drained; and the soil for the late Cabbage should be heavier and more retentive of moisture and not so rich as for early crops, as the heads are liable to burst.

To have Cabbage real early, sow seed in hotbed in February, or still better, Winter over the crops in a cold frame. For this purpose the seed is sown from the tenth to the twentieth of September. From four or five weeks from the time of sowing they will be fit to transplant into the cold frames. It is very important that the plants be set down to the first leaves so that the stem is all under the ground, otherwise the stem would split by the action of the frost.

These early Cabbage plants are set out in March or April, in rows three feet apart and 18 inches between the plants. The early crop matures in June. For second early crop, sow seed first week in April and plant out in May. The crop matures in July and August. Late Cabbage for Fall and Winter use, sow seed in May to June. The plants are set in July, a distance of three feet between the rows and two feet between the plants. This crop matures in October. Cabbage should not be planted two years in succession in the same spot of the garden. One ounce of seed will produce 3000 plants.

Extra Early Varieties

30. Early Jersey Wakefield Cabbage. Special Selected Stock a variety that is very popular with the early shippers. Produces a medium size compact head, well pointed, and very attractive in appearance. This variety is planted in large quantities for the early market. Pkt. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 75c. Lb. \$2.50.

Extra Early Cabbage—Cont'd

25. Big Winner Wakefield. (Specialty, see page 8.) It has the same general characteristics of other Wakefield Cabbages, the heads being conical with a rounded or blunt point. It is, however, far superior to other strains of Wakefield Cabbage, being nearly double the size and better quality, and at the same time is fully as early. It has few outer leaves, permitting close planting, so that more heads can be grown to the acre than with other sorts. Pkt. 10c. Oz. 30c. $\frac{1}{4}$ Lb. \$1.00. Lb. \$3.00.

26. New Leader. As early as the Wakefield, yields 12,000 heads, one-third more per acre than any other extra early Cabbage. The outer leaves are so few and so small that they can be planted very close. The heads are compact and solid from the time a head is formed and keeps so until thoroughly matured, thus enabling extremely early cutting of small, hard heads, or later when the Wakefield comes in, of large, thoroughly matured, solid, round, flat heads. Pkt. 10c. Oz. 25c. $\frac{1}{4}$ Lb. 75c. Lb. \$2.75.

27. Extra Early Express. Ten days earlier than Jersey Wakefield. Heads rather small, but very solid and sharp pointed. Pkt. 10c. Oz. 25c. $\frac{1}{4}$ Lb. 75c. Lb. \$2.75.

28. Extra Early Jersey Wakefield. An Improved early strain of Jersey Wakefield, slightly smaller and one week earlier. Pkt. 10c. Oz. 25c. $\frac{1}{4}$ Lb. 90c. Lb. \$2.75.

373. Enkhuizen Glory. Is a valuable, early variety. It produces fine, marketable heads and is a splendid sort for the private garden and market gardener who grows for high-class trade. The heads are very solid with but few outer leaves and of such compact growth to permit close planting. The quality is excellent. Pkt. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 75c. Lb. \$2.50.

29. Extra Early Pilot. Compares closely with Extra Early Jersey Wakefield both as to size and earliness. Pkt. 10c. Oz. 25c. $\frac{1}{4}$ Lb. 90c. Lb. \$2.75.

32. The Charleston or Large Wakefield Cabbage. A favorite large pointed type, matures a week or ten days later than Jersey Wakefield but is much larger. This variety is grown extensively to follow the Jersey Wakefield, and to precede the flat varieties. Pkt. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 75c. Lb. \$2.50.

Stein's Early Flat Dutch

595. Stein's Early Flat Dutch. Unexcelled for early spring planting, producing medium-sized heads that are unbeatable for home use or shipping purposes. No garden is complete without some of this splendid strain. Pkt. 10c. Oz. 25c. $\frac{1}{4}$ Lb. 75c. Lb. \$2.50.

33. Early Large York. This is a very valuable, early variety and follows the Express and Jersey Wakefield in heading. The heads are round, heart-shaped and firm. Its dwarf growth will permit them being planted closely together. Pkt. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 75c. Lb. \$2.50.

34. Early Winnigstadt—The Prussian Prize Stock. The popularity of Winnigstadt Cabbage in all sections of the world is proverbial, but there is a great difference in the quality of the stocks. Some will produce heads of twice the size of others; the finest is grown in Northern Prussia. It is from this section that our famous stock was introduced a few years ago. It has become very popular with our market gardeners. Pkt. 10c. Oz. 25c. $\frac{1}{4}$ Lb. 75c. Lb. \$2.50.

Second Early Varieties

154. Bolgiano's Early Square Deal Cabbage. (Specialty, see page 8.) The heads are solid and compact with very few outer leaves. A fine, solid, tender, uniform, early, flat Cabbage. The demand for a Cabbage of this character led us, by the most rigid and careful selection during the past five years, to mature this Cabbage, which we are confident will give all our friends and customers a "Square Deal" every time. Pkt. 10c. Oz. 30c. $\frac{1}{4}$ Lb. \$1.00. Lb. \$3.50.

35. Bolgiano's New Early Cabbage. It forms solid, compact, round, flat heads, the leaves growing close to the head, thus allowing more Cabbage to be grown to the acre than any other sort. Its earliness (a week before other early, flat varieties) is one of its best marketable features. Pkts. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 75c. Lb. \$2.50.

38. Early Summer Cabbage. In size, form, solidity and earliness this is truly a model Cabbage. It heads just after our Jersey Wakefield. Pkt. 10c. Oz. 20c. $\frac{1}{4}$ Lb. 65c. Lb. \$2.25.

Brussels Sprouts

Culture. Sow in May, in the same manner as Cauliflower, and transplant in July, 2 feet apart in rows $2\frac{1}{2}$ feet apart. Brussels Sprouts is the very best Winter vegetable that can be grown. It is as hardy as the common Curled Greens. When cooked through, such sprouts melt in the mouth like the tenderest Cauliflower, and are equally as good. If more widely known, Brussels Sprouts would be as popular as it is valuable.

22. **BOLGIANO'S MATCHLESS LONG ISLAND IMPROVED BRUSSELS SPROUTS.** Resembles cabbage very closely except that where the cabbage grows only one large head, the brussels sprouts grow large numbers of small, delicious, tender, heads at each leaf joint, throughout the entire length of the stalk. These small heads measure from one and a half to two inches in diameter, and are of light green color. This improved strain is an exceptionally heavy yielder. Plant grows from one and a half to two feet high. Brussels sprouts are usually offered for sale in market packed in quart boxes and always bring a very high price. It is a profitable crop to grow. Pkt. 10c. Oz. 30c. $\frac{1}{4}$ Lb. \$1.00. Lb. \$3.00.

Collards

23. **Georgia Southern, or Creole.** Forms a large, loose, open head, or a mass of leaves on a tall stem. Freezing does not injure, but rather improves their quality. Sow thick in drills, in rich ground, transplanting when 4 inches high, or sow in drills where the plants are to remain and thin to 1 or 2 feet apart in the row when of proper size. In the South, sow from January to May, and August to October. Pkt. 10c. Oz. 15c. $\frac{1}{4}$ Lb. 25c. Lb. 75c.

Culture

The soil and culture requirements of Cauliflower and Cabbage are similar. Seed may be sown and handled in the same way as described in the Cabbage culture. It is best to plan your planting to have no Cauliflower maturing in the hot summer months, as the cool weather of late Spring and early Fall is best adapted for the growing of perfect heads.

Bolgiano's New Century Cauliflower

Culture. One ounce will produce about twenty-five hundred plants and sow about two hundred feet of row. Sow the last of March or early in April, in an open border, in rich, mellow ground in shallow drills, watering freely in dry weather. By rolling or pressing in the seed, the result will be more satisfactory than when only covered. Cut the tops off once or twice before planting out, to make them stocky. When the plants are 5 or 6 inches high, transplant the dwarf varieties 3 feet and the taller sort 4 feet between the rows; plant 6 inches apart in the rows. Cultivate well and when large enough, blanch by earthing up. The first operation is that of "handling," generally done by the beginning of September. After the soil has been drawn up with the hoe, it is drawn around each plant by hand to keep the leaves firm in upright position and prevent spreading. When plants have become "set" in an upright position and the Celery is wanted for early use, they should be "banked." This is done by throwing the soil up as close to the plants as possible with a plow and finishing it with a spade, bringing the earth nearly up to the tops of the plants. The method employed now for protecting it is by covering the tops of the banks with waterproof felt paper.

Culture. Seed of the sweetest varieties is liable to rot if planted in wet or cold ground. Yet if we have an early warm spell in Spring, it may pay you to take some risks. Often the plants, when once up will escape injury by a belated light frost. Plant in warm soil 5 to 6 kernels to a hill, making the rows 3 feet apart for the dwarf or early sorts, and 4 feet apart for the taller late sorts. Hills to be 2 to 3 feet apart in the rows, thin out to 2 plants in a hill. Always remove the young suckers attached to the larger plants, and permit no weeds to grow. Planting should be made once a week, from the moment the ground is warm enough until about July 15th, using the early varieties for the first three plantings. Quantity required, one quart for 200 hills, 8 quarts per acre.

Culture. Sow as soon as the ground is dry in the Spring, in rows 12 to 18 inches apart, every week or 10 days for succession, up to the middle of June, after which they are little used, unless a cool northern spot can be found where the ground is shaded during part of the day. They should be sown in light, rich soil, as a crisp Radish cannot be produced in heavy soils. Sow also in early Fall for late crops and Winter use. Sow 8 to 12 pounds to the acre. Radishes should be eaten when quite small; it is a mistake to let them grow too long and too large. This applies, particularly to Ruby King and small turnip-shaped sorts.

TOMATE

Culture. Big crops can be had from a few Tomato Vines, not a garden should be without Tomato Plants. Well prepared soil is one of the secrets of growing good Tomatoes. First loosen the top soil 8 inches deep by turning it over same as a plow furrough, and before turning the top soil again, loosen the sub-soil 15 inches deep. Be careful not to turn the sub-soil to the top. If you are using a plow you should have a sub-soil plow to follow in the furrough of your top-soil plow. This is important as Tomatoes must have well drained soil to do their best, and the very best way to drain the soil is through the sub-soil. When the moisture is stored there, it will supply the plant with moisture during the long dry season that is likely to come.

Second. Seed that has been saved from selected stocks is very important to grow the kind of plants to set out. The seed should be sown in hotbeds or in the house March 1st. When the plants are 2 inches high transplant to 3 inch pots, as pot grown plants are the best. They are more prolific and will last longer when set out without disturbing the roots. The early varieties should be planted outdoors just as soon as danger of heavy frost is over, and cool nights should be protected by paper caps that can be easily made from old newspapers. There are several methods of handling the plant after they are planted out. Some plant 4 feet each way and allow the plants their own freedom, others plant 3 feet in rows and 18 inches in the row, and tie up to stakes. If this method is used the vine should be pruned to single stem. Well rotted manure worked through the soil will add to your yield. You cannot get the soil too rich for such varieties as the John Baer, Bolgiano and the Glory. One ounce of seed to 3,000 plants.

Culture. The Turnips require a rich soil. When grown quickly they are more solid and tender and may be grown either as an early or late crop. For an early crop sow early in Spring soon as soil can be worked in drills 18 inches apart. Thin out to stand 3 inches apart. These will be ready for use before hot weather develops. Late Turnips are usually sown broadcast on land from which some early crop has been removed, during July or August. The roots need not be gathered until after several frosts. May be stored for Winter use in cellar or pits outside. Before storing the tops should be removed.

Ruta Baga are usually sown in June in drills 30 inches apart. Thin out to stand 6 inches apart in row.

Fertilizers for the Farm, Garden and Lawn

We present a list of our brands of Fertilizers. You cannot judge the merits of a Fertilizer only by the analysis, but you must have a knowledge of the basis from which it has been made.

It is a well-known fact that the animal waste products produced in the abattoirs give the purest and most available basis for Ammonia and Phosphoric Acid. This is the basis of our goods. The company that manufactures our Fertilizers own and control a sufficient number of abattoirs, independent of the meat trust, to secure for our goods this unexcelled source of our plant food. The expense is almost as much working and reaping one-half a crop as it would be harvesting a full crop, which a good fertilizer would help to produce.

The four columns in the Analysis represent the following ingredients respectively: Ammonia, Phosphoric Acid, Potash, Bone or Phos. of Lime.

Bolgiano's Druid Hill Park Green Lawn Grass Seed will give a green, smooth, velvety sod with a thick bottom and free from such varieties of common grasses as produce clumps and knots on the lawn, which so frequently spoil the desired smoothness.

In the beautiful parks and cemeteries in and around Baltimore, where best results may be had in order to produce beautiful and enduring turf, Bolgiano's Druid Hill Park Green Lawn Grass Seed is used almost exclusively.

Before seeding, the soil must be thoroughly prepared, pulverized, and enriched with Sheep Manure and Bone Fertilizer before sowing the seed. A mixture of 75 lbs. Pulverized Sheep Manure to 25 lbs. Make the children a present of a package of seed and a watering pot and teach them to water when necessary. Do not thin out the plants and they will have a grand display of flowers the entire summer. 1141 Bolgiano's Wonderful Prosperity Yellow Dent Corn Will Out Yield Any Other Variety of Yellow Corn

Bolgiano's Prosperity Yellow Dent Corn is the most attractive, largest, finest, and greatest yielding corn ever introduced.

When we brought out this corn over twenty years ago, it was the best yellow corn we had ever seen, and today it is far better, than when we introduced it, as we have improved it year by year by very careful selection and breeding, by these painstaking efforts adding three more rows to the cob and increasing the depth of the grain, besides adding to its beautiful deep golden color.

We know of no yellow corn today that will equal Prosperity in appearance and yield. The grains are large and deep and cover the cob over the tip. It is a luxuriant grower, the fodder attaining a height of twelve to fifteen feet in good soil.

When grown in the vicinity of Baltimore it is ready to cut in from 110 to 120 days from time of planting.

If you want to grow the biggest and best crop of corn, you have ever raised, let us persuade you to use Bolgiano's Prosperity, we cannot afford to mislead you. Pk. \$1.00. Bu. \$3.50.

Mammoth Golden Beauty Corn. A very good yielding variety, ears averaging 9 to 12 inches in length, with grains somewhat broader than Reid's Yellow Dent, and of attractive color. Pk. 85c. Bu. \$3.00.

Mr. J. B. Harner, of Waynesboro, Va., writes under date of October 23, 1923.

The Prosperity Seed Corn which I ordered from you in the Spring, has proven to be great corn.

The germination was good, and we had a good stand from the first planting. I cut the corn 10 by 12 making 120 hills to the shock.

The peck of corn I purchased from you made over 60 barrels of good sound corn.

1140. Reid's Yellow Dent. This is a splendid Yellow Dent variety with 18 to 24 rows of kernels on an ear. The cob is small and red and the grains are very close together. The ears average 8 to 10 inches long. The stalk is very heavy and is not easily blown down. It matures in 100 days and is a heavy yielder in the Middle and Southern States. Pk. 85c. Bu. \$2.75.

1143. Improved Leaming Corn. Its extreme earliness and fine quality has made it very popular with the farmers, and especially with those in the localities where the seasons are short. It produces from 65 to 90 bushels to the acre, in accordance with the quality of the soil. The ears and grains are of medium size. Pk. 85c. Bu. \$2.75.

White Varieties of Seed Corn

1299. Eureka Ensilage Corn. The very best Silo Corn on the market. For many years we have used great care in the selection of our seed, which will give a large amount of fodder, 3 or 4 long, slender ears of Corn to the stalk. Grows to a height of 15 feet. Can be sown in hills or planted in checked rows. It is a very rapid grower and can be grown throughout the United States with wonderful success. Growers should not miss planting this special variety of ours for their Silo Corn. Pk. 85c. Bu. \$2.75.

1145. "Hickory King" White Corn. So large are the grains and so small the cob that on an ear broken in half a single grain will almost cover the cob section. Of a strong growth, the stalks take a firm hold in the ground and stand upright, resisting severe storms. It yields splendid crops on light soils, and is undoubtedly the best and most productive White Field Corn for the South. Pk. 85c. Bu. \$2.75.

1148. Bolgiano's Cuban Giant Ensilage Corn. We have thoroughly tested the Cuban Giant beside all large white grain ensilage varieties. Grains are pure white, very large, broad and long. Of stronger vitality than any other variety. It is the best milk producer of all ensilage Corns, being as sweet as Sugar Corn. Out yields the Red Cob Ensilage and is 10 to 12 days earlier. Pk. 85c. Bu. \$2.75.

1214. Evergreen Broom Corn. Improved. An excellent variety; is a good length, fine, straight and has a green appearance when ripe, and sells at the highest market price. Sow in drills three feet apart and thin out to three inches. Sow 5 pounds per acre. Lb. 15c.

1215. Collier's Excelsior White Corn. We believe this to be the best all around White Corn in existence. It is a heavy yielder; has large ears, deep grain, small cob and produces good-sized fodder, free from barren stalks. Matures in 110 to 115 days. Pk. 85c. Bu. \$2.75.

1054. Red Cob 90-Day Corn. This Corn meets a long felt want, because it can be used as a roasting ear Corn and when fully matured makes a first-class Crop Corn for feeding stock. The ear is large, handsome, suits for an early crop or for a late crop, because it matures in 90 days. This makes it always a safe and profitable crop. Pk. 85c. Bu. \$2.75.

1142. Maryland White Corn. This very handsome Corn is the favorite of old farmers who like a big grain on a small cob. The grain is pure white, with good-sized ear, having ten rows to the cob. Used for general crop. Pk. 85c. Bu. \$2.75.

1257. Boone County White. Ears well filled out at both ends, cylindrical, 9 to 11 inches long, averaging 20 rows, some 18 and 22. Grain very deep, a little rough. Cobs white, of medium size. Pk. 85c. Bu. \$2.75.

1069. Connecticut Field or Large Yellow Pumpkin. Excellent for growing in Corn. Lb. 50c.

1058½. Kentucky Field Pumpkin. Very large and flat, grown extensively and profitably in cornfield. Lb. 50c.

Sorghum

1146. Early Amber Sorghum. Furnishes a large yield of most nutritious forage, which can be fed either green or cured, and will yield 2 or 3 cuttings a year, stooling out thicker each time it is cut. It grows 10 to 12 feet high. Sow broadcast for forage at the rate of 1 to 1½ bushels per acre. When sown in drills, sow at the rate of 1 peck per acre in drills 3½ to 4 feet apart. Please write for prices.

1158. Early Orange Sorghum. This variety is rapidly growing in favor wherever it is grown. Similar in growth to Early Amber, but it is claimed that it produces a heavier crop. Please write for lowest prices.

All seeds are thoroughly tested for purity as well as germination before leaving our warehouse. We maintain within our establishment a most modern and well equipped, seed testing laboratory, which we invite you to visit whenever you have an opportunity.

The Illinois Self-Watering Flower Boxes

The Illinois Self-Watering System absolutely assures success with plants, bulbs and ferns in the home. This system is based on the principle of subterranean irrigation, a principle which is accepted by agricultural authorities as most conducive to the healthful growth of plants. In our window boxes and hanging baskets this method is ingeniously adapted through the use of sponges and a false bottom (see diagram below). The correct quantity of water is assured to the delicate root fibers of the plants at all times, the water being drawn up slowly by means of capillary attraction. Rapid and luxuriant growth results.

WE GUARANTEE

Every Box, Pot or Basket WILL NOT LEAK. Blooms will be larger and foliage heavier than in any surface-watered device. We will replace any box that leaks or wears out in any part within FIVE YEARS of date of purchase. We will refund the purchase price of any box or pot not giving satisfaction if returned within 60 days.

THE "OUT-U-KUM" WEED PULLER

An Entirely New Principle

A slight Push and Pull thoroughly loosens the surrounding soil and removes not only the weed, but the entire root.

When pushed into the ground, the two points guide the BRIDGE down alongside the weed, loosening the soil from that side. It then crosses under the root disengaging the latter. As the tool is withdrawn the BRIDGE slips up the opposite side of the weed, loosening the ground from that side and engages the head of the weed above the ground. The now thoroughly loosened weed is readily withdrawn in its entirety with little or no clinging soil.

Price, 75c each.

ARMSTRONG STANDARD SPRAY PUMP

A One-Man, One Hundred Purpose Pump

As Supplied for Spraying from Bucket

The Armstrong Standard Spray Pump is simply a very carefully designed and accurately made "squirt-gun" provided with a proper outfit of nozzles. Its simplicity largely accounts for its unusual power.

Its plan of operation is so simple and so different from other types of spraying apparatus. This permits the use of the hose on the suction end instead of on the discharge end. That is why it is possible to use the Armstrong Standard either with a bucket, barrel or knapsack, depending upon the number of trees or the kind of spraying to be done. The work of spraying is always done **from the ground**. No ladder, long extension or raised platform is needed. A large tree can be completely sprayed with **ten or a dozen strokes** of the pump.

The Armstrong Standard Pump, with short hose and all three spraying nozzles (for bucket use).....each **\$4.25**
Knapsack attachment, galvanized iron, five gallons capacity, ready for attaching to pump.....each **3.10**

By different arrangements of the several nozzles regularly supplied, sprays of varying fineness—from a mist to a straight stream that carries sixty feet—are produced.

The Armstrong Standard is made entirely of brass. No leather packings are used and no metal subject to rust or decay. Every Armstrong Standard is warranted for five years. This makes it the most economical spraying device on the market.

Keeps the Flies Away from the Cow
Increases Milk Production Over
20 Per Cent

Don't let your cows suffer from the torture of flies. When their energy is used to switch the flies from their backs they cannot give the maximum amount of milk. It makes them irritated and run down.

Spray the cow twice a day with SO-BOS-SO KILFLY and the flies will not bother the cows while milking or while in the pasture. Not injurious to skin. Will not gum the hair. Positive protection. Is the most effective preventive against the torture of flies known to chemical science. Has been used for over 17 years in the United States and foreign countries.

FOR HORSES. You can spray the horses while at work and they will respond with more and better work. Their energy, like the cow's, is wasted

No. 28 Whitewash Sprayer and Force Pump

No. 28. Whitewash Sprayer and Force Pump is designed for use in pail or bucket, and will fit any size. The pump is made of galvanized iron. The top and bottom are made of brass. It is regularly equipped with 3 feet of best hose, 1-foot brass extension rod and a brass nozzle, which will give two different sizes of sprays. It has ball valves and steel foot rest. The pump is provided with an overflow, which carries all the liquid which might get above the plunger back into the pail. The plunger is easily removed and easy to operate, due to double action. Made with large air chamber. The pressure being held in the air chamber and on the nozzle

enables the operator to throw a continuous spray, which is not affected by the movement of the plunger.

Much more work can be done with this pump in a day than can be done with a brush. The force with which the material is applied causes it to penetrate the small crevices, making a perfect job. Price **\$2.75**.

One of the most troublesome and destructive pests with which the peach grower must annually contend is the peach borer. This insect is found generally throughout the United States wherever peaches are grown, east of the Rocky Mountains.

For the control of the borer PARA-DICHLOROBENZENE has proved to be safe and most effective.

Bolgiano's Bird Houses

KEEP YOUR BIRDS AT HOME

Great enthusiasm is now being shown in the protection of our native song birds; fewer birds migrate because the many bird friends are doing all in their power to keep the birds at home by placing feeding boxes and shelters conspicuously on their lawns and groves, to feed and shelter them from the winter storms. In doing this you are furnishing food for the birds when it is impossible for them to find food from natural sources.

You understand birds are great insect destroyers; it is reported by the United States Department of Agriculture that Blue Birds, Robins, Black Capped Chickadee, House Wren, Brown Thrasher, Cat Birds, Barn Swallows, Towhee, Song Sparrows, Field Sparrows, Purple Groat, Baltimore Oriole, Meadow Lark, Red Winged Blackbird, Bobolink, Blue Jay, Phoebe, Flickers, Red Headed Woodpeckers and Yellow Billed Cuckoo are all great insect destroyers. The Government has gone very extensively in their investigation, and on examining the stomach of the birds they have found the larger percentage of its contents to be insects, and many of these insects are giving the fruit growers the most trouble; had our birds been protected years ago, spraying would not be necessary today. From the Government investigation was learned another important truth, that birds feed on weed seed, and this is of great benefit to the American farmer, as it reduces the crop of weeds that oftentimes prove a destruction to crops in wet seasons.

Why should we neglect something so important and something that means so much to our welfare? Let us impress you to start now and use your best efforts to protect your birds and keep them at home.

Put up feeding boxes and feeding shelters. Keep plenty of feed in them. We can supply you with the many different varieties. Wild seeds make a good feed for the birds. If you want birds to have their home in the grove near your home, take advantage of the opportunity now and put up bird nest boxes. They will build their nests there in the spring, thus making your home a source of pleasure with their morning songs. What is more beautiful than having all the trees filled with birds warbling their songs? Don't delay in putting up the bird box nest, as they locate their nest building early.

Cans

Consists of one 12 x 18 inch steel retort, with cover, packing, etc., steam gauge, one perforated galvanized crate, one safety valve, one petcock, one triangle and one thumb nut wrench.

In order to be prepared to can all varieties of fruit, vegetables, meats, fish, etc., it is absolutely necessary to have a "Steam Pressure Canner," as this is the only way you can be assured of perfect sterilization. A great many vegetables and all meats require a pressure of 250 degrees Fahrenheit for perfect sterilization, and the only way this can be attained is with steam under pressure. Our "National" Junior No. 1, which is illustrated above, is particularly well adapted for canning in the home and also for use by Government demonstrators. It will hold ten quart jars or fifteen pints at one loading. Tin cans may also be used. With one of our small canners you can put up enough fruit, vegetables, meats, etc., to supply the table for the entire year at a great saving.

A Few Reasons for Canning in Sanitary Tin Cans With The Burpee Home Can Sealer

Marketable.

When canning is done in the regular marketable size tin cans, much fruit and vegetables that now go to waste can be canned and sold.

Simple and Easy to Operate. The machine is simple, inexpensive, easy to operate and can be clamped to any table. One machine can be used to seal the No. 2 (pint) and No. 3 (quart) size cans. A separate machine is used for sealing the gallon cans.

Receipts. A book of reliable receipts for canning fruit, vegetables, soups, meat and fish is supplied with each machine.

Costs Less. The cost of tin cans is much less than glass jars and there is absolutely no danger of breakage.

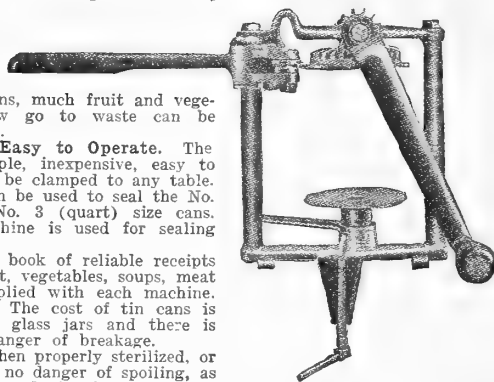

No Loss. When properly sterilized, or cooked, there is no danger of spoiling, as the cans always seal airtight.

Flavor Retained. The delicious flavor of the fresh fruits and vegetables is not lost when canning in tin cans, because the cans are sealed airtight before the cooking is done.

Reduces Labor and Fuel. By piling the cans one on top of another when being cooked, twice the amount can be cooked in the same time.

"National" Aluminum Pressure Cooker

The high cost of living can be reduced materially by the use of our Aluminum Pressure Cooker and many hours of time can be saved by the housewife every day in the year. The outfit is complete in every detail and should be a part of the equipment of every kitchen. It is made of highly polished aluminum and the fittings are all of high-grade brass, which also adds greatly to the appearance of the cooker. The cooker may also be used for canning in small quantities.

The steam gauge registers the number of pounds pressure in the cooker at all times and is absolutely reliable. The petcock is to create free circulation of steam and should be left entirely open until all the cold air is forced out of the cooker and steam commences to pass off, when it should be partly closed. The special safety valve, which is made specially for use with the "National" Pressure Cooker, is adjustable so that it can be set at any desired point and will automatically blow off the excess steam so as to maintain the desired pressure for the necessary length of time. This is one of the features of the "National" which will not be found in any other style of pressure cooker. There is absolutely no danger connected with the operation of it, and a complete receipt book, together with instructions for operating, are furnished with each outfit.

"Thrift" Way

"Thrift" Seals Them Tight and Keeps Them Right

How many of the jars of vegetables and fruits that you "put up" last year spoiled? Canning experts state that for every dozen jars packed, processed and sealed the ordinary way, two are lost. But not the Thrift Way—because foods canned the Thrift Way can't spoil. They are mechanically and hermetically sealed before cooking; sealed just as the big packers seal their jars for market—with all the flavor and juices in the jar. The Thrift Way is easier and quicker, too. No uncertain tops or rubber rings to bother with; no hot jars to handle. It isn't the number of jars you "put up" its the jars that keep that count. That is why so many women who can foods for home or market are using the Thrift Way.

THE THRIFT SEALER

"Thrift" Way Jars Are Extra Strong

Thrift jars are made of the finest clear flint glass. They will stand unusual extremes of heat and cold; and constant use for many years. Made in two sizes, quart and pint and a quarter with wide mouths making them easy to fill and clean.

The "Thrift" Sealer

A filled jar (filled only to within one-half inch of the top) is placed in sealer, with patent cap on mouth of jar. Lowering handle of sealer presses head of sealer over cap and mechanically "crimps" cap on mouth of jar; sealing it airtight—hermetically. As an extra precaution lift handle, give jar a slight turn and again press down handle, giving the jar an extra sealing. No strength or skill is required to seal the Thrift Way; a child can do it perfectly.

1 1/4 Pint Thrift Jars and Caps \$1.15 per dozen.

1 Quart Thrift Jars and Caps \$1.40 per dozen.

Extra Thrift Caps per box of 6 doz. \$1.80.

Thrift Sealer \$2.50.
